```
1   ManageIQ Python API Client
2   ==========================
3
4   This python package provides the ManageIQ API Client library.
5
6
7   Getting Started
8   ---------------
9
10  Preparing your python virtual environment::
11
12      $ virtualenv venv
13      $ source venv/bin/activate
14      $ pip install -e .  # To create an editable install of this package
15
16  If you want to install it directly from GitHub::
17
18      $ pip install git+https://github.com/ManageIQ/manageiq-api-client-python.git
19
20  To run the example present in this repository you probably need to configure
21  your options (if different from the default shown here)::
22
23      $ export MIQURL=http://localhost:3000/api
24      $ export MIQUSERNAME=admin
25      $ export MIQPASSWORD=smartvm
26
27      $ python example.py
28
29  To run the example with an API Token use these settings::
30
31      $ export MIQURL=http://localhost:3000/api
32      $ export MIQTOKEN=< place real token here >
33
34      $ python example.py
35
